

Team Details

Scholarship Hunter AI

AI scholarship discovery, ranking, and application co-pilot for underserved students.

Mission: ensure that no eligible student loses funding because information is fragmented, hidden, or administratively overwhelming.

Why this matters: scholarships are often available, but opportunity is not operationalized for the students who need it most.

Competitive edge: explainable eligibility matching + deadline intelligence + AI drafting support in one workflow.

EdTech + AI

Social Impact First

Submission Ready

Submission Snapshot

Project domain: AI for Education Access and Inclusion

Primary user: Students from low-income and underrepresented backgrounds

Secondary users: Advisors, NGOs, scholarship offices, and institutions

Core promise: Find all relevant scholarships and convert them into completed applications

Team section: Replace with final team name and member names before submission

Problem Statement

Why deserving students lose scholarships today

1. Scholarship information is scattered across portals, college notices, NGOs, foundations, and PDFs.
2. Eligibility rules are hard to interpret across income bands, category rules, location, academic filters, and document requirements.
3. Students often miss deadlines because they manage applications manually across multiple calendars and channels.
4. Drafting essays, statements of purpose, and supporting content is time-intensive and intimidating for first-generation applicants.
5. Advisors and institutions lack one live view of student progress, application quality, and risk of drop-off.

Prototype pain severity index (/100)

Student journey friction map

Net result: high-potential students receive fewer high-fit scholarship opportunities and complete fewer applications than they could.

Objectives

01

Discover

Continuously aggregate scholarships from trusted, distributed sources into one searchable opportunity graph.

02

Match

Map each student profile to scholarship rules with transparent eligibility reasoning and confidence scoring.

03

Prioritize

Rank scholarships by fit, deadline urgency, award value, and completion effort so students know where to act first.

04

Assist

Generate first-draft application content, check missing documents, and simplify essay preparation.

05

Track

Send deadline reminders, show progress status, and enable advisors to intervene before students drop off.

Success Metrics

85% lower**Search time**

Minutes instead of hours

2.5x**Better fit**

Transparent ranking + explainability

3x**More submissions**

Draft support + reminders

60%**Less advisor load**

Shared progress dashboard

North star: every student receives a prioritized scholarship action plan with reasons, deadlines, and a guided next step.

Tech Stack & Architecture

Experience Layer

Student web dashboard | Scholarship planner | Essay workspace | Accessibility-first UI

Application Services

FastAPI APIs | Authentication | Advisor console | Notification service | File/document handling

Intelligence Layer

Eligibility rule engine | Semantic retrieval | Ranking model | LLM drafting copilot | Explainability module

Data & Integrations

PostgreSQL + student/application data | Vector store for scholarship content | APScheduler reminders | PDF/OCR parsers | Portal/API connectors

Suggested Stack

Frontend: React / Next.js

Backend: FastAPI

Data: PostgreSQL + vector DB

Agents: LangGraph-style orchestration

Parsing: PDF/OCR extractors

Scheduling: APScheduler / queues

Trust: RBAC, audit logs, PII encryption

**Design principles: low-cost,
explainable, multilingual, advisor-
friendly.**

Feasibility & Viability

Feasibility Matrix

Viability Story

Pilot path: Start with one college or NGO partner, onboard students, validate scholarship coverage and completion lift in a single cycle.

Go-to-market: B2B2C model for institutions, CSR foundations, scholarship offices, and nonprofits serving first-generation learners.

Sustainability: Low marginal cost per additional student because ingestion, matching, reminders, and first-draft support are automated.

Trust model: Human-in-the-loop review for sensitive applications, transparent reasoning for rankings, and permissioned data sharing.

0-6 weeks MVP

6-12 weeks pilot

Scale

Impact & Benefits

Stakeholder Benefits

Students: Personalized scholarship plans, less search fatigue, stronger applications, better funding access.

Advisors: A live dashboard for follow-up, deadline risk detection, and application completion visibility.

Institutions: Higher scholarship utilization, stronger student success metrics, and structured support data.

Scholarship providers: Better applicant quality, improved targeting, and broader reach into deserving communities.

Pilot success targets (% improvement)

These are pilot success targets to demonstrate measurable value during initial deployment.

SDG 4

SDG 10

Equity by design

Final impact message: we do not just help students find scholarships; we build a system that operationalizes opportunity.
